POWERFUL SOLUTIONS. GLOBAL FORCE.

THE QUICKEST AND EASIEST WAY TO START WORKING RIGHT AWAY

CAT 7 SERIES BALL JOINT TORQUE TOOL

Enerpac has developed an extended reaction arm specifically suited for torquing ball joints on CAT 7 series trucks.

Over the years there have been several mine site incidents around the sudden and unplanned loss of steering due to the failure of the trucks steering arm ball joint. The cause of the failure more often than not is incorrect bolt torque, resulting in the loosening of the bolt assembly and leading to failure of the joint and steering system.

The custom reaction arm is used in conjunction with Enerpac's S6000PX square drive hydraulic wrench which allows technicians to safely and accurately tighten the ball joints to OEM specified torque during routine maintenance periods.
